1 ELECTRONIC LIVESTOCK AUCTIONS STARTING IN BRITAIN A national network  
of electronic auction franchises that could radically change the sale of  
primestock is being established in Great Britain. Already five out of the  
eleven that are needed to cover the country are operating and another three  
5 are due to begin business shortly. The Franchise is owned by EASE  
(Electronic Auction Systems Europe), an Inverurie-based subsidiary of  
Aberdeen and Northern Marts Ltd.

Under the terms of their EASE franchise agreements, companies  
operating within strictly specified regional boundaries are offering an  
10 on-farm primestock sales service that is open to subscription paying,  
abattoir based buyers working from any location in the country. Although it  
is offered principally as a primestock sales service, electronic auction is  
also used in the grain market and may eventually cover a wide range of  
other agricultural commodities. It is expected that the EASE electronic  
15 franchise will eventually be extended to cover operations in other EC  
countries.

The system allows buyers connected by computer to bid from their  
offices for cattle which are still feeding on their farms. Lots are  
assembled by team of auctioneers and fieldsmen visiting farms within the  
20 area of the franchise owned by the auction company. Other franchise  
companies are expected gradually to extend their cover until every GB  
primestock producer has the opportunity to sell within the electronic  
system.

Assessor estimates carcase classification

25 Cattle on each farm are assessed and their description is printed on  
a sales catalogue which is available to every subscription payer. Each  
company uses the electronic auction password to tap into the computer at  
the sales centre and receive the catalogue through computer printout. The  
assessor estimates the weight of the animals and also their Meat and  
30 Livestock Commission (MLC) carcase classification on the EUROP grid to help  
deadweight buyers get a more accurate impression of the cattle before them.  
This, and the farm location are aimed at helping buyers become familiar  
with the quality of cattle from the holding and the descriptive accuracy of  
the assessor.

35 The terms of sale are that the vendor's price is fixed on carcase  
weight and MLC classification. The weighing location is the abattoir itself  
but EASE franchise holders will sell only to companies where carcasses are  
weighed independently by the MLC. Cattle have to be collected from the sale  
location by the purchaser within seven days of sale and payment is made by  
40 the auction company within 14 days. The agent charges 2% sales commission  
and the vendor can place a reserve price.
